The Lawn

Schling's Maxima Grass Seed Mixtures

There are many Grass Seed mixtures offered under various brand names. The basis of all good Grass Seed mixtures, however, must necessarily be the same regardless of the brand name. The important feature of a good mixture is that it contains heavy, plump seeds from selected Grass stocks that have been grown for the distinct purpose of seed production. Careful blending plays its part in the compounding of a high-class Grass Seed mixture. We have prided ourselves upon the super-quality of our Grass Seed mixtures which have established a reputation in the past 25 years.

SCHLING'S MAXIMA SPECIAL LAWN MIXTURE.

SALVIA

Welwyn

AN EXCLUSIVE SCHLING FEATURE IN FOUR NEW COLORS

An exclusive Schling introduction. We are indeed proud in having the privilege of presenting the splendid new colors of Salvia Splendens that were produced on the Estate of Mrs. Harold I. Pratt, "Welwyn," at Glen Cove, Long Island, through the tireless efforts of the super-intendent, Mr. George Ferguson. The ability to develop a distinct color break in Salvia and to maintain its purity so that it actually reproduces itself 100 per cent true from seed is an excellent example of horticultural craftsmanship.

WELWYN PINK. A pure, clear salmon-pink, blending in with any planting.

WEYWYN WHITE. A pure, glistening white, particularly attractive for planting among Evergreens, Boxwood and for clump planting in broad expanses of lawn.

WELWYN PURPLE. Presents a unique color for combination effect, particularly so with red and white Salvia.

WELWYN MAHOGANY. Is in a class by itself and can be used to tone up any garden or park planting.

WEYWYN LILAC. A true lilac shade as illustrated above.

50c per pkt.; 5 pkts for \$2.25; individual colors or your selection.

Greetings . . .

TO GARDEN LOVERS

Our 1941 Book for Garden Lovers, which presented a new face and a new form to our clientele, was greeted with great enthusiasm. It is not easy for a firm to change the form of a catalog that has been standardized for over one quarter of a century. The demand for this book last year was so great that we were forced to disappoint numerous garden lovers who requested a copy, because their requests were too late.

We are printing considerably more of the 1942 edition and we are retaining our new format, for we feel that we would like to repeat our successful performance of last year.

There will be many old favorites missing from this catalog due to the fact that our contacts with world-wide sources have, for obvious reasons, been sharply curtailed. Such items as *Lilium Speciosum Album* and *Rubrum* from Japan are among the missing as well as a great number of perennial and herb seeds which were formerly imported from the Balkans. In addition to this our main seed growing sections on the Pacific Coast were inundated during the seed producing season with the result that a great many of our popular items are in very short supply. Nevertheless, as usual, we have been most fortunate in securing a wide variety of lovely garden subjects, and you will note that in spite of the foregoing hardships our new prices compare very favorably with those of former years.

Since the introduction of the Double Sensation type there has been a steady demand for these fine Cosmos in separate colors. It is now our pleasure to offer these in two colors both of which represent an improvement over their counterparts heretofore offered in mixture.

Peerless Pink Lady. Two forms of double flowers are found in this strain. One is a fluted type and the other a crested type. The fluted type is a deeper shade of pink than the crested.

Peerless White Cloud. Beautiful soft velvet-white. Originators claim on trial 65 per cent double. Percentage of double flowers occasionally depends upon the growing season and is quite variable.

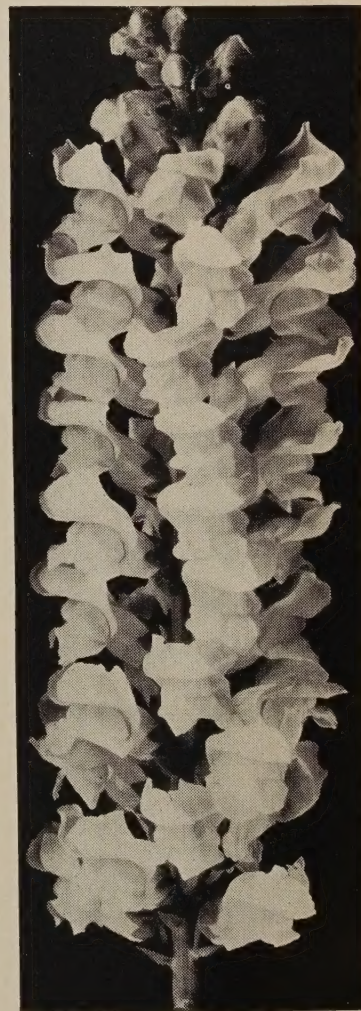

Price on each of the above: Pkt., 75c; 3 pkts. for \$2.00.

There are so many purposes for which this marvelous plant can be utilized that it would be impossible to enumerate them.

ASTERS, New Princess Type Wilt-Resistant

SCHLING'S GIANT EXHIBITION DAHLIAS

From Seed

We have been very fortunate in obtaining the seed stocks of one of the famous Dahlia breeders in the United States who has introduced Gold Medal Dahlias for a great many years and has the distinction of introducing the famous Dahlia pictured on page 49, "Lynn Fontanne."

This seed stock is the result of selective cross hybridization and contains within this selection the same strain that has

produced the splendid prize winning originations of this Dahlia Hybridizer. It is very reasonable to assume that the purchaser of this seed will find varieties that are entirely new to the Dahlia world and the selection may contain many prize winning varieties.

Trying some of this seed is not a gamble, for every plant will produce true prize winning Decorative Dahlia blooms. Price: Pkt., \$1.00; 6 pkts., \$5.00.

The Collection of six varieties will give high satisfaction, permitting the cutting of literally armfuls of sweet and exquisite flowers for many long weeks. The culture is easy: Sow early, prick out the seedlings into a "flat" or into small pots, plant out at convenience.

Beauty of Nice. An exquisite shade of rose-pink.

Cannes. A beautiful pearl-pink. Especially fine.

Schling's Famous

ANNUAL WILD GARDEN MIXTURE

It is our wish that we would have sufficient space to list all of the testimonials that we have received in praise of this marvelous seed value. We have received reports from all sections of the country extolling the beauty and practical results obtained from sowing this mixture. Carefully blended to strike a perfect balance between the showy bright annuals and those of more subdued tendencies, the result provides a bold effect where required and a vista of real beauty covering large areas where it would be impossible to intensely cultivate a garden. Left to themselves, the vigorous hardy annuals in this mixture self-sow and it can be safely said that a wild garden produced from this seed will be more or less permanent. Oz., 25c; 1/4 lb., 75c; lb., \$2.25.

Cleome, Pink Queen
Silver Medal Award, All-America, 1942

We have chosen the subjects on this page to illustrate in color for we consider them outstanding. We should like very much to impress upon our clientele the beauty and effectiveness of the new **Cleome**, the all-around satisfaction of the **Glory-of-the-Riviera Carnations** which are aptly described on the opposite page. The **Pacific Hybrid Delphinium** hardly require much introduction any longer but we feel that the **Base-Branching Type of Larkspur** does and this illustration will serve to portray its full beauty.

Long-Lasting Cut Flowers

SCHLING'S SUPERB ASTERS

Wilt-Resistant Varieties Only

Asters bloom profusely during August and September. To be able to cut abundantly and over the longest possible period, you should make several sowings of the early-, medium- and late-flowering types. The first sowing in the hotbed in March, transplant the seedlings when they have four leaves, in boxes, 1 inch apart, or singly into small pots. Harden off and plant out in May. The soil should be rich and deeply dug. Set plants of the early varieties 10 inches apart and those of the later varieties 12 to 14 inches apart. The second sowing can be made in a cold frame or in a seed-bed outdoors the latter part of April, and the third sowing the latter part of May.

Schling's Magnificent PETUNIAS

No flower has achieved such rapid popularity as have Petunias within the past decade. Petunias are so prolific that proper culture requires frequent trimming of the plants so that cutting the blooms not only provides a splendid source of cut flowers, but aids the general growth of the plant as well. Petunias are impartial. They will grow anywhere, in semi-shade or in hot, dry sunny locations. Seeds of Hardy Flowers

PERENNIALS and
BIENNIALS

HOW TO GROW THEM. Hardy plants (perennials) bloom the second year from seed and are permanent thereafter. Some of them may bloom the first year if the seed is sown very early. Among the perennials we find some of the most beautiful flowers for cutting and many of the old-fashioned sorts dear to our childhood memories. A hardy border properly planned and planted is a source of joy from early spring to late autumn; during that period it will be resplendent with color and yield an abundance of bloom for indoor decoration. The plants need little attention other than to be kept free from weeds and given an occasional top-dressing of plant-food.

WHEN TO SOW. Seed may be sown in a hotbed in February or March, or out-of-doors from the first days of May to mid-August. It is well to sow as early as possible, thus permitting the plants to become strong and well established before winter.

WHERE TO SOW. For most perennials a cold frame is an ideal place for starting seeds, but if you do not have one, make a seed-bed of finely sifted light soil, adding and mixing thoroughly well-decayed manure, humus, or prepared plant-food. Sow the seeds in shallow drills, covering $\frac{1}{8}$ inch or more, according to the size of the seed, but very fine seed should only be lightly pressed into the soil.

CARE OF SEEDS AFTER SOWING. Press down the bed with a flat board, and water gently but thoroughly with a fine spray. Do not permit the soil to become dry while the seed is in process of germination, for until the plant develops roots its life depends entirely on moisture. Nearly all failures in growing perennials may be attributed to drying in the seed-bed, which should be carefully watched and watered until the plants have made four to five leaves.

CARE OF PLANTS AFTER GERMINATION. Most seeds will germinate in from eight to fourteen days, but others may need a month or so; therefore do not become impatient. If seedlings come up very thickly, pull out some and transplant to boxes or other seed-beds; later they may be set out in the permanent place. Transplanting should be done before October 1st, to permit the plants to become established before frost. Mulching the plants with leaves, salt hay, or peat moss about the middle of December is a distinct advantage. The leaves and hay must be removed in spring, but the peat moss may remain. Full cultural directions will be found on each packet of Schling's seeds.

HARDY FLOWER SEED

Everybody wants perennials in generous measure, to secure effects in color and charm. If you delay and finally buy plants, an attractive perennial border may require several hundred dollars' worth of plants.

Exactly the same results can be secured with \$10 to \$15 worth of Seeds! And aside from the money-saving, you have the fascination of growing your own plants, nursing them from the beginning, and loving them all the more! Sow your seeds now, and the plants will bloom next year.

NEW AMERICAN DELPHINIUMS Pacific Hybrids

In addition to the splendid new types of Pacific Hybrids as pictured in color on page 11, the following varieties are grouped in separate color classes and represent the original Pacific Hybrids strains. These are in our estimation superior in every respect to existing varieties that have been imported from abroad. One of the most distinctive features of Pacific Hybrids is the fact that they are at least 90 per cent wilt-resistant in most climates and this fact in itself establishes their superiority over imported stock.

Clear White. Individual shades, 2 to 2½ inches in diameter, clear, glistening white with heavy texture. Not mildew-resistant. Pkt., 75c.

Lavender Pastel Shades. Color-range from light lavender to deep smoky lavender, generally of two-tone combinations with brown or black bees. Florets 2½ to 3 inches in diameter. Pkt., 75c.

Light Blue Shades. Color-range from light to medium blue with white, fawn, and black bees. Individual florets 2 to 2½ inches in diameter. Mildew resistant 40 to 60 per cent. Pkt., 75c.

Dark Blue Shades. Color-range from medium to dark blue with white and dark bees for contrast. Florets 2 to 2½ inches in diameter. Mildew resistant 40 to 60 per cent. Pkt., 75c.

Mixed Colors. Pkt., 75c.

Full Heart**

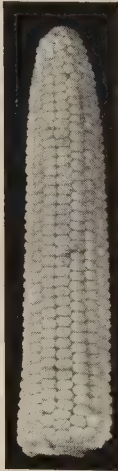

Celery, Schling's Full Heart

This exclusive variety has been developed by one of the foremost Celery growers in Pennsylvania. Particularly adapted for adverse growing conditions, Full Heart is a rapid growing, easy blanching type of excellent flavor. Pkt., 35c; * oz., \$1.50; oz., \$4.00.

Enthusiastic gardeners do not confine their activities solely to the raising of beautiful flowers. The production for the home table of palatable, delicious vegetables is a source of great satisfaction. Purchased vegetables, regardless of their excellence and quality and the beautiful new methods with which they are packed, invariably fail in flavor as compared with home-grown fresh vegetables. In recognition of the ever-growing demand for something new in vegetables, we offer a list of the newest developments in the vegetable world.

Something Entirely New!

A SUCCESSION OF SWEET CORN

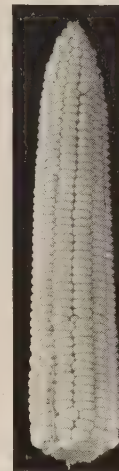

We now present for the first time a revolutionary idea in the growing of Sweet Corn. Many years ago we introduced our famous Long Season Pea Collection. Now, we take pleasure in presenting our Long Season Hybrid Sweet Corn Collection. As a result of experiments conducted by the Connecticut Experiment Station, which is the leading authority on Hybrid Sweet Corn in the United States, we are able to offer a collection of 5 varieties of Hybrid Sweet Corn which will bear in constant succession for a period exceeding 4 weeks with no two varieties ripening together. In order to continue the season after the collection has ripened we advise successive plantings of Golden Cross Bantam which is the latest variety in the collection and which can be planted with safety up until July 1st.

Each one of these varieties has been chosen for its wilt-resistant qualities, heavy-bearing propensities and fine flavor. For this reason we can offer this collection with absolute assurance in the fact that these varieties can be classified as **wilt-resistant — heavy-bearing — excellent flavor.**

Spancross 4.13. Extra-early.
Marcross 13.6. Early.
Carmelcross 39.13. Early midseason.
Whipcross (Lincoln) 39.23. Midseason.
Golden Cross Bantam. Late midseason.

Do not forget to provide for extra quantities of Golden Cross Bantam for successive planting.

Method of Handling

At the time when you usually sow your early Sweet Corn, arrange to plant the entire collection together. Every 2 weeks thereafter plant an additional quantity of Golden Cross Bantam until the latest possible date.

New Bush Bean, Medal Refugee

All-America Bronze Medal, 1942. A Refugee type of bean. The first new variety in this class introduced for many years. The pods are round and of medium length, absolutely stringless and fiberless. The seeds, unlike the old Refugee types, are white. This variety is very thrifty in growth and will produce a fine crop regardless of weather conditions. Last season through most drought-ridden areas Medal Refugee proved itself impervious to the abnormal growing conditions. Pkt., 25c; 1/2 lb., 75c; lb., \$1.25; 2 lbs., \$2.25.

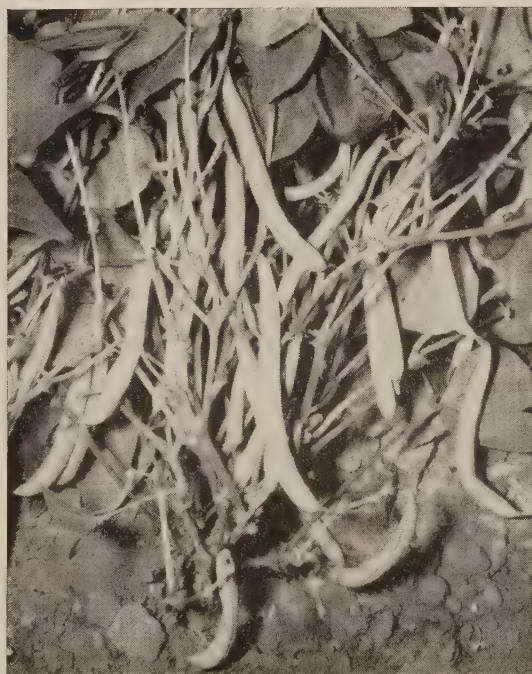

Edible Soy Bean, Green Giant

This outstanding member of the Soy Bean family has proven itself one of the most delicious vegetables ever introduced. Several of the famous eating places in New York have featured this Bean, cooked green in place of the French Haricot Vert and Baby Lima Beans. These Soy Beans are extra early and will mature in 76 days from sowing. Possessed of a rich, nutty flavor, they will prove a welcome addition to the green vegetables. The nutritive value of these Beans has been well established and for years they have been the mainstay in the diet of millions of Asiatics. Pkt., 25c; 1/2 lb., 50c; lb., 85c; 2 lbs., \$1.65.

Two Decorative and Delicious Vegetables

FLAVOR-RITE BEANS

Dwarf or Bush Green-Podded

Culture. Beans grow well in any good garden soil. Usually the first planting can be made the last week in April, followed by successive plantings about two weeks apart until August 15. Open a drill 2 inches deep and drop the Beans 1 inch apart and cover. When well up, draw the soil up against the plants and cultivate frequently. Do not cultivate them when the dew is on the plants, as this frequently causes rust. One pound of seed is sufficient for 50 feet of drill.

Plentiful. All-America Bronze Medal. An improved Bountiful type. Strong, productive plants, light green, straight flat pods entirely stringless and of excellent flavor. Pkt., 25c; 1/2 lb., 40c; lb., 75c; 2 lbs., \$1.35.

Pole Lima Beans

Where poles can be secured, these Beans are more productive than the Bush varieties. Set poles 3 feet apart, enrich the soil in the hills by mixing with it a liberal supply of fertilizer or well-rotted manure. Do not plant until the ground is warm.

One pound will plant 50 poles.

LEVIATHAN EXTRA-EARLY. Earliest Pole Lima, and a very heavy bearer. Pods 5 to 6 inches long, with Beans of delicious flavor. We recommend it as the most prolific Pole Lima Bean. 1/2 lb., 30c; lb., 55c; 2 lbs., \$1.00; 8 lbs., \$3.50.

Lima Beans, Dwarf or Bush

Bush Limas are nearly 2 weeks earlier than Pole Limas. The seed is quite tender, and will rot while the ground is cold or wet, so do not plant before the ground is warm. For very best results, however, the seed can be started in pots in a hotbed or in the greenhouse and the plants set out when the weather is settled. Plant in rows 3 feet apart and from 4 to 6 inches apart in the row, always edgewise, with the eye down.

One pound will plant a row 50 feet long.

Baby Potato Bush Lima. All-America Silver Medal, 1940. Most outstanding Bush Bean to date. Bred for exquisite flavor and prolific production. The pods mature very uniformly in approximately 72 days from sowing. Pkt., 25c; 1/2 lb., 40c; lb., 75c; 2 lbs., \$1.35.

BURPEE'S IMPROVED BUSH LIMA. Plant bears heavily, and the pods fill out very evenly. The Beans are more flat than Fordhook. 1/2 lb., 30c; lb., 55c; 2 lbs., \$1.00; 8 lbs., \$3.75.

Also grown for its bright scarlet flowers, which are born profusely and are very ornamental. 1/2 lb., 25c; lb., 45c; 2 lbs., 80c.

English Broad Beans

Long Pod. The Broad Bean is grown entirely as a crop for shelling. Somewhat larger than Limas, delicious when cooked. English Broad Beans are very hardy and the seeds should be sown at the same time as peas. 1/2 lb., 30c; lb., 55c; 2 lbs., \$1.00.

Schling's Luscious Peas

Do You Know This Secret?

Do you know how to avoid the usual disappointment of a poor Pea crop after mid-July? It is easy to get big crops of luscious juicy Peas "falling right over one another," in steady succession even up to late August—if you learn this secret:

Instead of planting at 2- to 3-week intervals, get the following picked varieties and plant all at once in early spring, **the moment the ground can be worked.** This will allow a good root-system to develop before hot weather comes. The varieties will bear in the order shown below (and pictured opposite), beginning about June 20 and keeping up a steady succession of big mouth-watering crops until late August.

Schling's "Long Season" Pea Collection

IMPORTANT. All varieties in this Collection must be planted at one time as early in the spring as the ground can be worked.

Our famous ever-bearing collection has undergone a complete revision this year. Tests have proven to us that varieties of recent development have superior qualities over some of our old favorites. With the exception of the last two varieties in this collection, (which could not be replaced), we offer a new revised garden pea collection.

1. **World's Record.** Uniform maturing first early pea. Medium heavy producer. Pointed broad and plump pods containing 7 to 8 large tender peas of good quality. Pkt., 15c; ½ lb., 25c; lb., 40c; 2 lbs., 75c; 8 lbs., \$2.75.

3. **President Wilson.** Very succulent, maturing directly after Laxton's Progress. One of the finest peas in our collection. Pkt., 15c; ½ lb., 30c; lb., 55c; 2 lbs., \$1.00; 8 lbs., \$3.25.
4. **Schling's No. 40.** Completely resistant to mid-summer wilt. Extremely large pods containing 9 to 10 enormous peas. Pkt., 15c; ½ lb., 30c; lb., 45c; 2 lbs., 85c; 8 lbs., \$3.00.

You may even prolong the season for another week or two by making a second planting of No. 6 (Heroine) about 2 to 3 weeks later, but not after May 10.

When vegetable plants are set out early they often require protection from late frosts. Such plants as Cucumber, Lettuce, Melons, Tomatoes, Lima Beans, etc., can be set out much earlier with great safety if they are protected by the Cobb Miniature Greenhouse—see page 72, or the famous Hotkaps—see page 72. Small garden owners may start plants early by using the Miniature Plant Frame as listed on page 72.

Schling's Exquisite Hardy Garden Lilies

Schling's exquisite hardy garden Lilies have earned for themselves the right to occupy an important place in every garden. Not only are they highly prized for their magnificent colorings and superb perfume, but mass plantings create such a beautiful effect that they may be rightly termed Queen of the Garden. If planted in a well-drained location, they will provide many years of genuine garden enjoyment.

Due to the treacherous attack upon us by war-crazed Japan, we are unable to present a great many varieties of Lily bulbs of which were usually imported from that country. The varieties are *Lilium Auratum*, *Speciosum Album*, *Speciosum Rubrum* and, to a certain extent, *Lilium Henryi*. We are omitting the listing of the first three varieties altogether and we can offer a limited quantity of *Henryi* of American-grown stock.

Due to the defection of these popular Lilies the demand for American-grown varieties has been far greater than normal and our suggestion is to place your order as early as possible for whatever Lilies we have listed. We are particularly fortunate in being able to list a fine stock of Regal Lilies.

Lilium Regale

Auratum. See explanation above.

Canadense. Graceful spikes of bell-shaped blooms. Yellow spotted black. Height 3 ft. Blooms June and July. \$1.05 for 3; \$3.50 per doz.; \$25.00 per 100.

Canadense Rubrum. Rich deep red form of above. Very fine. \$1.20 for 3; \$4.00 per doz.; \$27.00 per 100.

Candidum (Madonna Lily). August, September planting recommended on these. Due to world-wide conditions we suggest that orders be placed early for this Lily, as stocks are very scarce.

Hansonii. Substantial pendulous orange flowers with an exhilarating fragrance. Bloom in June. Height 4 to 5 feet. 3 for \$1.65; \$6.00 per doz.; \$42.50 per 100.

Henryi. Very hardy and vigorous orange and yellow. Flowers shaped like *Speciosum* Lilies. Bloom August and early September. American-grown bulbs. 3 for \$1.40; \$5.00 per doz.; \$37.50 per 100.

Pardalinum, Sunset. A splendid development in the Leopard Lily class. Beautiful orange-red. Reversed petals. Center of flower pure golden yellow. This striking Lily produces a dazzling effect. Height 4-5 feet. Blooms August. \$1.20 for 3; \$4.00 per doz.; \$30.00 per 100.

TWO NEW AND RARE VARIETIES OF LILIES FOR THE CONNOISSEUR

T. A. Havemeyer. A cross of *Henryi* and *Sulphureum*. Received the Royal Horticultural Award of Merit in 1937. General form and size like *Lilium Auratum*. Color all over a rich nankeen-yellow. Blooms August 1st. \$5.00 each.

***Lilium Sulphureum*.** Without doubt one of the most beautiful of all trumpet Lilies. Of perfect Easter Lily form. The trumpet-like flowers often measure 11 inches in length. The color is an exquisite pale lemon-yellow. Height 4 to 5 feet. Plant up to 12 inches deep. Excellent for greenhouse forcing. \$1.75 each; \$20.00 per doz.

***Philippinense Formosanum*.** (The hardy pure white Easter Lily). The only pure white hardy Lily of its kind. Height 4-5 feet. Blooms late August. \$1.25 for 3; \$4.25 per doz.; \$30.00 per 100.

***Lilium Regale*.** Connoisseurs of fine garden subjects as well as those who appreciate honest to goodness garden value are well acquainted with this most satisfactory of all Lilies. Practically disease resistant. As hardy in Maine as in the Carolinas, *Regale* Lilies are truly a garden "must."

Exhibition bulbs. 3 for \$2.25; \$7.50 per doz.; \$55.00 per 100.

Mammoth bulbs. 6 to 8 blooms per bulb. 3 for \$1.55; \$5.50 per doz.; \$41.00 per 100.

Strong flowering bulbs. \$3.50 per doz.; \$25.00 per 100.

Szovitzianum (Giant Caucasian Lily). Once again it is our privilege to present these graceful and rare Lilies. Stems 4 to 5 feet in height. Color pale yellow spotted deep purple. Plant 5 to 6 inches deep. Patience should be exercised in growing these Lilies for they may make little or no growth the first year. They will surely come through the following season. \$2.50 each; \$27.50 per doz.

Tenuifolium (Coral Lily). Coral-red recurved Lily, gracefully spaced. Splendid for forcing. Perfectly hardy. 3 for 75c; \$2.50 per doz.; \$18.00 per 100.

***Tenuifolium, Golden Gleam*.** Bright yellow form of the above. Very choice. 3 for \$1.05; \$3.50 per doz.; \$24.00 per 100.

LILIES FOR GREENHOUSE FORCING

From January on the only variety that is recommended for greenhouse forcing is *Lilium Giganteum*. Of superior substance and ruggedness, this variety is best able to withstand the extreme temperatures of midsummer in the greenhouse. Bulbs 9 to 11 inches in circumference. \$5.50 per doz.; \$40.00 per 100.

A gorgeous Hybrid Cactus Dahlia of immense size. Flowers fully 13½ in. diameter, often with a depth of 9½ in. The color as pictured can best be described as a subdued cinnabar-orange, which has attracted the attention of Dahlia lovers wherever shown. We have sent trials to various sections of the country and the reports are amazing. Lynn Fontanne has also been awarded the highest honors in the Dahlia world by having been selected on the honor rolls of "House Beautiful" magazine as well as "The Flower Grower."

Strong tubers, \$7.50; green plants, \$3.50.

HULIN'S MELODY.

A golden semi-cactus with a slight tendency to informal decorative that produces 10- to 12-inch flowers 5 inches deep. As illustrated, the face of the petals is gold; the reverse, streakings of old rose. This color combination, with the natural whirl of the petals, makes for an effect of gold with a suffusion of rose.

At the Western Washington Fair, which is the largest Dahlia Show in the country, it won a silver cup from the Fair Association as the sweepstakes entry of all the seedlings in a class of 31 entries.

Strong tubers, \$10.00 each; green plants, \$5.00 each.

Schling's Approved Gladiolus

Without exception there has been no garden flower which has been so thoroughly and consistently improved in the past decade as the Gladiolus. It is within the memory of almost every Gladiolus lover when a spike measuring 12 inches of bloom with the blooms averaging 2 inches in diameter was considered the last word in Gladiolus blooms. Today it is not unusual to find varieties with blooming spikes averaging well over 30 inches with individual florets up to 6 inches in diameter. In addition to the increase in size, color developments have been made combining practically every color known to man in a wealth of selection embodying two-tone and solid colors.

Schling's approved Gladiolus as listed are a top selection made by experts. It will be noted that a great many of our varieties have been listed by eminent Gladiolus Societies as the best in their color class. We warrant that our bulbs are plump, over-sized grading, thrip-treated and thrip-free.

Notes On Gladiolus Culture

WARNING! It is our sincere advice to you not to attempt to grow Gladiolus unless you are prepared to spray regularly throughout the growing season. We recommend the following formula:

**1 Lb. of Tartar Emetic
4 Lbs. of Brown Sugar to 25 Gallons of Water**

Price of Tartar Emetic: 1-lb. containers only—\$1.50 per lb.
Price of Corrosive Sublimate: 4-oz. package \$1.50; 1-lb. package \$5.50.

Will control as well as prevent any thrip infestation. This formula can be made up in any quantity using the same proportions. If you are planting old bulbs, we advise the following treatment: submerge the bulbs in a solution of 1 oz. of Corrosive Sublimate (Bichloride of Mercury) to 7½ gallons of water. Submerge bulbs before planting and they may be planted while still moist. Bulbs should be submerged at least two hours.

THE MODERN BUDDLEIAS

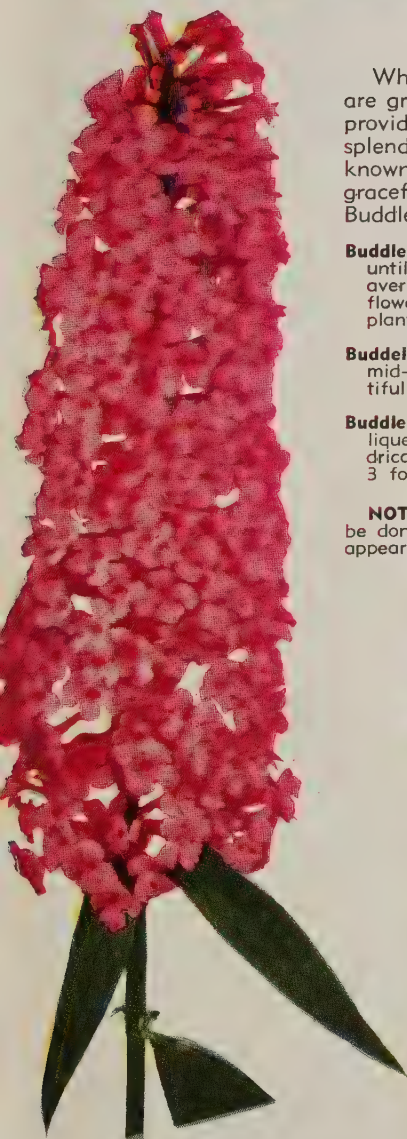

While they are not entirely brand new, we feel that there are too few gardens that are graced by the presence of these remarkable all-around plants. Not only do they provide a gorgeous show from mid-summer through fall, but they do provide the most splendid cut flowers that can be obtained from the mid-summer garden. Commonly known as summer Lilacs, they far exceed true Lilacs in beauty for they are extremely graceful and lend their beauty to all cut flower arrangements. An arrangement of Buddleia by themselves is an object of great beauty.

Buddleia, Fortune. An abundance of flowers produced through the entire summer and autumn until killed by frost. Flower spikes are perfectly cylindrical, borne on a neat growing shrub averaging 4 to 5 feet in height. An outstanding feature of this grand variety is that the cut flowers will last longer than most Buddleias. By all means, if you do not already have this fine plant, make provisions for it this year. 3 for \$2.00; \$7.50 per doz.

Buddleia, Pink Charming. Charming is a distinctly new color in Buddleias. A rich pink during mid-summer, it will turn darker towards the late summer and fall. It is an outstandingly beautiful shrub for the garden as well as an excellent cut flower. 3 for \$2.00; \$7.50 per doz.

Buddleia, Dubonnet. The newest introduction of the 3 Buddleias offered, Dubonnet is the true liqueur color of Dubonnet and in the full sunshine it appears as a glowing red. Spikes are cylindrical and firm. The foliage is very satisfactory, having a decorative value in itself. 3 for \$2.00; \$7.50 per doz.

NOTE: Buddleias may be cut back every fall to within a few inches of the ground. This may be done in the spring as well. If this practice is followed, the plants will present a fresh new appearance each year and it is a far better practice than allowing the old growth to remain.

Rosa Rouletti

The World's Smallest Rose

This tiny Rose, the smallest in the world, is unsurpassed as a pot plant, as a rock garden specimen, or as an edging to a bed of larger Roses. The tiny pink buds, 1/4 inch long, open to perfect little Roses of a tender shade of pink; the flowers are double and are freely produced all season. Plant in poor soil and the little plants will not grow over 6 inches tall; they are perfectly hardy outdoors. 75c each; \$7.50 per doz.

CULTURE OF ROSES

Roses grow best in a rich garden loam deeply dug and well enriched with well-rotted cow-manure or bonemeal. On receiving the plants, open the bundle and immerse the roots in a pail of water. Remove each plant from the pail only after the hole is dug and you are ready to plant. Dig a hole sufficiently large to accommodate the roots, and pour a half pail of water into the hole; in filling, shake the plant lightly so that the soil may fall evenly all around the roots; this prevents cavities. The "bud" should be 1 to 2 inches below surface of soil. Firm the soil well around the plant and hill up with soil to a height of 8 to 10 inches at once. After the ground is thoroughly frozen, cover with leaves, salt hay, or straw. Bush Roses can be set 1 1/2 feet apart, climbing varieties from 4 to 6 feet apart.

THE WORLD'S FINEST ROSE SPRAYS

Three Combination Sprays that combine all of the necessary chemicals for the control of every disease and insect that Roses are heir to. We recommend each of these impartially. They have all been tested and found most satisfactory.

Summer - Flowering Bulbs

OF DISTINCTION AND MERIT

AMARYLLIS HALLI

(*Lycoris Squamigera*)

While it is fully described on page 55, we nevertheless feel that a garden subject of such exceptional merit as the Magic Lily, as it is affectionately known, requires the fullest possible publicity. There is nothing, in our estimation, that can provide more garden enjoyment than the growing of a few of these splendid bulbs. They will amply repay for they are perfectly hardy and will bloom in the garden for many years. They may be dug up after the third year and separated. A choice gift for garden loving friends. Price: \$1.25 each; \$12.50 per doz.

TUBEROSE—THE PEARL

An old-fashioned favorite that is regaining its popularity by leaps and bounds every year. Stocks are limited due to the demands of perfume manufacturers who are using the fragrance of this flower as a base for fine perfumes. Selected jumbo bulbs, \$2.50 per doz.; \$17.50 per 100.

The DENNISON Improved SEED STARTER SET

Without doubt one of the finest innovations that has ever been presented to garden lovers. The water-proof boxes make ideal seed starting sets—each section sufficient for the sowing of enough of each variety of flowers desired. Each compartment has complete printed directions for the proper depth at which each variety should be planted and a reservoir in the tray provides for scientific moisture control in that the seed trays are never watered over the top but absorb the moisture from the bottom which is the scientific and proper way to water young seedlings.

When the seedlings are large enough to transplant, the compartments may be dismantled and the seedlings removed with a minimum of root loss and injury.

Most attractively packed, the Dennison Improved Seed Starter Set makes an excellent gift for all interested gardeners who are sophisticated enough to know that the best results from garden flowers are obtained from those that are started in advance of the regular season. Price per set, 65c complete, postpaid.

ZINNIAS

Schling's New Giant Double Crested Mixed

Since its introduction last year, this outstanding novelty has been the subject of much comment. In our own trials and many other trials results vary very greatly. In some instances we noted as high as 60% doubles and in others, as low as 30%. Then again we noted quite a few reversion to the single type. Taking this novelty into consideration, however, we feel that regardless of how small a percentage of true, giant double-crested type is produced, this remarkable strain deserves planting. The originators are constantly improving the seed. We expect every year to have them produce a higher percentage of true types. We are sufficiently convinced that the item is of sufficient merit to warrant continued presentation to garden lovers. Pkt., 50c; 1/4 oz., \$1.85; \$5.00 per oz.

There is hardly a single garden subject that has met with as much popular approval for late June and July blooming as Oriental Orchid Iris. Those who are acquainted with Oriental Orchid Iris agree that they cannot be equalled for impressive beauty and exquisite delicateness as a cut flower. We offer a splendid collection on page 65.
